Dave Hall

Full Stack Software Engineer

daveghall@gmail.com · 9145649207 · https://github.com/d-g-h · https://www.linkedin.com/in/d-g-h

Senior full-stack engineer delivering customer-facing products and complex healthcare and enterprise workflows. Translates business requirements into accessible interfaces, GraphQL/API integrations, and reliable backend systems; leads migrations and partners with product and design teams. Experience includes cloud services and AWS Lex-enabled application development.

Experience

Senior Full-Stack Software Engineer / Freelance Consultant Remote · 2023-07 – Present

- Delivered healthcare SaaS web and mobile features, translating business and clinical workflow requirements into production software.
- Designed and integrated two healthcare applications using the Canvas API to support clinical workflows and data exchange.
- Led a zero-downtime migration from a legacy platform to a unified system, validating data integrity and coordinating the rollout.
- Built Cloudflare Worker services with KV caching, reducing redundant authentication requests and external API traffic by 800+ requests per day.
- Fixed a Supabase Edge Function defect that sent duplicate emails to hundreds of users; redesigned asynchronous workflows with idempotent execution, batching, and explicit state tracking.

Senior Software Engineer — TED New York, NY · 2022-11 – 2023-06

- Shipped six customer-facing features across Discovery Topics, Talk, and Member Pages using Next.js, Ruby on Rails, TypeScript, React, Tailwind CSS, GraphQL, and experimentation tooling.
- Designed, built, and maintained 10+ accessible, reusable UI components within the TED Design System, supporting consistent product experiences across teams.
- Improved release confidence and delivery speed by introducing code coverage tooling, leading focused code reviews, and pairing with engineers, reducing QA cycles and cutting deployment time by 31%.
- Drove cross-functional collaboration with frontend, backend, design, and product partners using Agile practices to deliver features with shared ownership.

Software Engineer — IBM / Kyndryl New York, NY · 2018-08 – 2022-06

- Delivered three internal single-page applications and supporting backend services using Vue.js, TypeScript, Node.js, and CouchDB to streamline employee workflows.
- Unified legacy APIs and Cassandra data through GraphQL services that powered reusable components for forms, dashboards, and profile pages.
- Designed and built an internal ingestion and migration tool to transition content from a legacy non-relational CMS to SharePoint, supporting the migration of 20,000+ enterprise sites.
- Strengthened backend service reliability by refactoring Node.js microservices, increasing test coverage by 85% and reducing production regressions.

Software Engineer — Infor New York, NY · 2016-02 – 2018-08

- Designed and demonstrated proof-of-concept prototypes to validate new product ideas and technical approaches.
- Built a progressive web application using Angular, NgRX, AWS Lambda, AWS Lex, and reactive programming patterns.
- Developed four reusable Wagtail CMS components in Python, improving content authoring efficiency for designers.
- Modernized a legacy jQuery content management system to centralize documentation for the Infor Design System.

Skills

TypeScript; JavaScript; React; Next.js; Node.js; GraphQL; SQL; PostgreSQL; Cassandra; CouchDB; Python; Ruby on Rails; Vue; Angular; AWS Lambda; AWS Lex; Docker; Git; Jest; Playwright

Education

Brooklyn College, Computer Science · CUNY City College, Psychology, MA · Binghamton University, Psychology, BA
