Summary

Senior full-stack software engineer with Python experience in freelance web scraping and Wagtail CMS development at Infor, plus recent healthcare SaaS and clinical-workflow integrations.

Experience

Senior Full-Stack Software Engineer / Freelance Consultant

Remote · 2023-07 – Present

- Built a Python web scraper for a bookstore inventory project serving students at a major university in New York City.
- Integrated two healthcare applications using the Canvas API to support clinical workflows and data exchange.
- Led a zero-downtime platform migration and fixed duplicate-email workflows using idempotency, batching, and state tracking.

Senior Software Engineer — TED

New York, NY · 2022-11 – 2023-06

- Shipped six customer-facing features and built 10+ accessible design-system components using React, Next.js, TypeScript, and GraphQL.
- Introduced coverage tooling, code reviews, and engineer pairing, cutting deployment time by 31%.

Software Engineer — IBM / Kyndryl

New York, NY · 2018-08 – 2022-06

- Built an ingestion and migration tool supporting the transition of 20,000+ enterprise sites to SharePoint.
- Delivered three internal applications with Vue.js, TypeScript, Node.js, and CouchDB; increased microservice test coverage by 85%.

Software Engineer — Infor

New York, NY · 2016-02 – 2018-08

- Developed four reusable Wagtail CMS components in Python for design-system documentation, improving content authoring efficiency for designers.
